

## Transporting Dirty Filters

### Transportation Procedure

- Remove the dirty filter(s) from the engine
- Stand the dirty filter(s) in a leak-proof container (eg: pail, pan, tub etc)
- Allow the filter(s) to drain for a period of 15 to 30 minutes
- Place the filters into the shipping case that was supplied with the filters
- Put the top cap on the shipping case and ensure that it is closed

As indicated in the picture, there may be only a slight film of oil on the filter(s). Since the filters do not absorb the oil, the remaining film will be less than a few ounces.

## Shipping Cases

Environmentally friendly leak-proof shipping cases for every size.
